DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-8 are rejected under 35 U.S.C. 102(a) as being anticipated by Hotta et al (JP 2002319726 A).

Hotta et al disclose a C/L wideband amplifier (see abstract) comprising: a first amplification section (12, 14, 16 and 20) configured to be pumped in a first direction, amplify first (SC) and second (SL) wavelength band optical signals and output amplified spontaneous emission (C band ASE); and optical attenuator (22) for attenuating the power of the amplified spontaneous emission; and a second amplifying section (24, 25, 28 and 38) configured to be pumped by the amplified spontaneous emission (see abstract) to secondarily amplify the L band optical signals.

The structure recited above reads on claim 1.

Claims 2 and 3 read on the output (39) and the signals denoted by (SC and SL).

Claim 4 is taught by element (16).

Claim 5 is taught by element (26).

Claim 6 is taught by elements (20) and (12).

Claim 7 is taught by element (14).

Claim 8 is taught by elements (38) and (28).

Application/Control Number: 10/688,593

Art Unit: 3663

Claims 9 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Mimura et al, Flood et al and Yeniay et al teach structures that use ASE to augment L-band amplification.

Any inquiry concerning this communication should be directed to Mark Hellner at telephone number 571 272 6981.
